PROFESSIONAL SUMMARY

Computer Science undergraduate with experience in backend development, data processing, and machine learning systems. Skilled in building data-driven applications using Python , integrating APIs, and managing code using Git. Interested in backend services, analytics pipelines, and automation-driven development.

EDUCATION

Manipal University Jaipur	June 2027	<i>B.Tech in Computer Science</i>	<i>GPA: 8.46/10</i>
Ryan International School (CBSE)	June 2022	<i>Senior Secondary Education</i>	<i>Percentage: 94.6</i>

TECHNICAL SKILLS

- **Programming:** Python , C, C++, JavaScript
- **Backend Development:** REST APIs, API Integration, Backend Architecture Basics
- **Databases:** SQL, Relational Databases
- **Data Processing:** Pandas, NumPy, Data Cleaning, Feature Engineering
- **Machine Learning:** Scikit-learn, PyTorch, Time-Series Modeling
- **Automation:** Python Scripting
- **Tools:** Git, GitHub, Linux, Jupyter Notebook, VS Code

PROJECTS

Market Regime Detection System (Live Demo) — Backend Analytics 2025

- Built Hidden Markov Model system for detecting regime changes in financial time-series data.
- Designed backend analytics pipeline using Python, Pandas, and NumPy for preprocessing and feature extraction.
- Developed API-based interface enabling real-time model predictions and visualization.
- Implemented automated scripts for data ingestion, model inference, and monitoring.

Logistics Shipment Tracking API — Backend System 2025

- Developed REST API service to simulate shipment tracking workflows used in logistics platforms.
- Implemented shipment lifecycle states including dispatch, transit, delay events, and delivery confirmation.
- Built backend data pipeline to process shipment logs and operational datasets using Pandas and NumPy.
- Generated analytics reports on shipment flow efficiency and processing times.
- Created automation scripts to simulate shipment updates and logistics event triggers.

Factor-Based Portfolio Strategy and Backtesting 2025

- Developed Python-based backtesting framework to evaluate financial strategies using historical datasets.
- Implemented data preprocessing pipeline and feature engineering using Pandas and NumPy.
- Calculated performance metrics including Sharpe ratio, volatility, and drawdown analysis.
- Visualized strategy performance trends using Matplotlib for analytics reporting.
